Customer Problem Statement

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An End User / Requester	Raise a network request with the necessary details and follow its progress	Unclear information or manual handling can delay processing and make status difficult to follow	A guided form and centralized request record are needed	Wants confidence that the request is moving forward
PS-2	An IT Admin	Maintain configurations and workflows that support automated request handling	Repeated manual actions can increase administrative effort and inconsistency	Reusable automation and manageable configurations are needed	Concerned about avoidable operational effort

Define the Problem Statement

USER / Employees requesting network services, supported by IT admins, network fulfilment members, and designated approvers. Employees who request network services, plus IT admins, network fulfilment team members, and approvers.	PROBLEM / Network requests may require repeated manual handling, while users and support teams need a consistent workflow with clear ownership and status. Manual effort and human error can affect network request fulfilment, while standardized workflows, approvals, and centralized tracking are needed.
NEED / A structured catalog item, clear variables, conditional form behaviour, automated approvals, record creation, and timely notifications. Catalog creation, form design, approval routing, Flow Designer automation, and email notifications.	IMPACT / Improve request accuracy, reduce avoidable manual work, shorten processing time, strengthen approval control, and make request progress easier to monitor. Reduce manual effort and human error; accelerate request fulfilment; standardize workflows and approvals; improve visibility and tracking; enhance end-user experience; ensure compliance with IT and security policies.
HOW MIGHT WE? / How might we make network service requests easier to submit, easier to approve, and easier to track through ServiceNow? How might we streamline and automate the end-to-end lifecycle of network-related service requests using ServiceNow?
